Bogotá, Colombia

Profile

Final-year Systems Engineering student at Pontificia Universidad Javeriana, with a focus on Artificial Intelligence, Machine Learning, and Data Analytics. Knowledgeable in data structures, databases, software architecture, and algorithm analysis, applied in academic projects on machine learning models, distributed systems, and collaborative web applications. Recognized for strong **achievement orientation**, **information analysis** skills, and **proactivity**, along with the **creativity** to propose new solutions, reflected in a project that won Red Bull Basement Colombia 2026. Thrive in multidisciplinary **teamwork** under pressure, and my **openness to experience** lets me adapt quickly to new technologies and technical environments.

Education

Pontificia Universidad Javeriana

Systems Engineering – Cumulative GPA: 4.1/5.0

Bogotá, Colombia

[2023] – [2027]

- Relevant coursework: Data Structures, Databases, Software Architecture, Artificial Intelligence, Distributed Systems, Numerical Methods

Technical Skills

Languages: Python (Advanced), SQL (Advanced), Java (Intermediate), C++ (Intermediate), JavaScript (Intermediate), Kotlin (Basic)

AI / Machine Learning: scikit-learn (Intermediate), Pandas (Intermediate), Whisper (Intermediate), Matplotlib (Basic), spaCy (Basic)

AI Agent Development: Claude Code (Advanced), OpenCode (Advanced)

Frameworks / Libraries: React (Intermediate), Node.js (Intermediate), Nginx (Intermediate), Spring Boot (Basic), FastAPI (Basic), Ansible (Basic)

Databases: PostgreSQL (Intermediate), Oracle (Intermediate), MySQL (Intermediate), MongoDB (Basic)

Tools / Cloud: Git (Advanced), Linux (Advanced), Docker (Intermediate), Kubernetes (Basic), AWS (Basic)

Languages (spoken): English (B2)

Academic Projects

Sign4All | *Flutter, FastAPI, Whisper, spaCy, Blender*

May 2026

- Developed, as part of a 3-person team, a speech-to-Colombian Sign Language (LSC) translator prototype: a cross-platform Flutter app with a FastAPI backend, an STT (Whisper) + NLP (spaCy) pipeline, and a 3D avatar (Blender, Manny UE5) built on an initial 10-sign corpus
- Winner of Red Bull Basement Colombia 2026 among 1,000+ ideas; team finished top 8 at the international final (San Francisco) with 40+ countries competing
- Repository: github.com/SamuOsorio/Sign4All

Elite Player Classifier (SVM) | *Python, scikit-learn, Pandas, Matplotlib*

May 2026

- Independently developed an SVM classifier (scikit-learn) to distinguish "elite" vs. "standard" players from 6 performance variables, comparing linear and RBF kernels
- Tuned hyperparameters with GridSearchCV and 5-fold cross-validation, evaluating with a confusion matrix and ROC/AUC curve
- Repository: github.com/SamuOsorio/SupportVectorMachine

Distributed Library Management System | *Python, gRPC, Docker, Kubernetes*

Nov 2025

- Designed, as part of a 4-person team, a distributed book lending/return system using gRPC and Protocol Buffers, documented with UML component and sequence diagrams
- Containerized a Flask app and deployed it on a local Kubernetes cluster, configuring autoscaling, rolling updates, and self-healing
- Repository: github.com/SamuOsorio/Proyecto_Distribuidos2530

Extra Editable | *Angular, Django REST Framework, PostgreSQL, Docker, Nginx, Ansible*

Jun 2026

- Developed, in collaboration with a 7-person team, a real-time collaborative code editing platform, integrating Hocuspocus/Yjs for concurrent synchronization over an Angular editor with a Django REST Framework backend
- Implemented an Nginx load-balancing gateway for 3 replicated instances, deployed with Docker and Ansible across 6 VMs, with JWT authentication and an LSP service for autocompletion
- Repository: github.com/SDM30/Extra-editable

Awards and Certifications

Winner, Red Bull Basement Colombia 2026 – among 1,000+ ideas; team finished top 8 at the international final (San Francisco), with 40+ countries competing
